Customer Profile

Wallace and Graham have a proud tradition of taking on the toughest cases on behalf of people who seek justice for injuries and illnesses.

The transformation of an empty rooftop into a revenue-generating profit center demonstrates to the community that investing in clean and renewable energy is economically viable as well as environmentally responsible.

Financial and Environmental Benefits

This system offers the Law Offices of Wallace and Graham a solid financial opportunity in an emerging energy market. Substantial Federal and State tax credits, accelerated depreciation, power-purchase agreements with Duke Energy, and incentives for clean energy generation from NC GreenPower, combine to create a secure investment with promising financial returns.

Through its expected 30 year-plus lifetime of clean energy production, this system will offset nearly four thousand tons of carbon emissions and other harmful pollutants.

“\textit{A commitment to solar energy is good for business as well as for the environment, and we are setting an example by installing what is now one of the largest privately held solar electric systems in the region to date.} \quad \textit{~Mona Wallace of Wallace & Graham, P.A.}\textit{”}
